### CUSTOMS DUTIES, etc.

Under the Customs Tariff Ordinance No. 16 of 1930.

For the purpose of assessing the amount of any customs duty, the value of goods for purposes of duty shall be taken to be the domestic value, as hereafter defined, together with the extra cost of packing and packages for export, carriage to the port of shipment and all other expenses incidental to placing the goods on board the ship, together with the cost of freight, insurance, and all other charges up to the time of importation into the Territory: Provided that in no case shall the value for purposes of duty be less than the cost of the goods to the importer at the place of importation.

The expression "domestic value" shall, in respect of imported goods, mean the market price at which at the time of exportation such or similar goods are offered for sale, for consumption in the country from which the goods are exported, to all purchasers in the usual wholesale quantities in the ordinary course of trade in the principal markets of such country including the cost of packages ordinarily used in those markets, but not including excise duties payable

in that country.

Provided that the value of goods arriving in the original coverings in which they were exported from the country of manufacture or shipment, for importation at any inland customs station in the Territory, shall be ascertained as though the place of importation were the first port of entry on the east coast of Africa.

### GENERAL NOTES.

The headings of the respective classes in this Schedule are used only for convenience of classification, and shall not in any way affect the interpretation of the Tariff.

"n.e.e." means "not elsewhere enumerated." The term "in bulk," when it appears in the Tariff, means—

(a) goods loose without packing, or loose in barrels, casks, or any other single outside package,

but not including goods imported by parcel post;
(b) when in internal packages, that the net contents of any immediate container of goods weigh not less than ten pounds or measure not less than one imperial gallon.

Goods chargeable with duty by weight are, except where otherwise provided for, charged with duty on the net weight, which may be arrived at either by weighing net, or deducting from the gross weight the actual tare or an average tare agreed to by the importer.

Tins, jars, bottles and other receptacles of reputed weight or content to be deemed not less than such weight or content.

Twenty-four reputed half-pints, twelve pints, six reputed quarts, or four reputed imperial quarts to be deemed to be not less than one gallon.

Tement in packages of not less than 350 lb and not more than 400 lb to be deemed 400 lb.

Oils and motor spirits in ordinary reputed two five-American-gallon or ten one-Americangallon tins to be deemed to be not less than eight and one-third Imperal gallons, and two reputed four-gallon tins to be deemed to be not less than eight Imperial gallons.

'Proof' shall mean the strength of proof as ascertained by Syke's hydrometer.

"Proof spirits" shall mean spirits which, at a temperature of fifty-one degrees Fahrenheit, weigh twelve-thirteenths of an equal volume of distilled water at the same temperature.

A complete article imported in an unassembled condition, except where specially provided for, is liable to the rate of duty which would be applicable to that article if imported in a fully set up condition, notwithstanding that the constituent parts are packed separately and are separately provided for elsewhere in the Tariff.

Integral parts of an article which is liable to an ad valorem duty, or is free of duty, imported for replacement purposes, or as spare parts, shall be liable to the same rate of duty as the article itself, or free of duty, as the case may be, unless they are specifically excluded, or provided for elsewhere, in the Tariff.

ESTATES, ADMINISTRATION OF. (Under Rules under the Administrator General's Ordinance (Cap. 13 of the Laws).)

(1) On estates administered by the Administrator General:

(a) A fee at the rate of 5% upon the amount or value of the assets collected; such fee shall be in addition to his expenses connected therewith.

(b) In the case of estates administered under the Regimental Debts Act, 1893, the rate shall be 3%.

(2) For the inspection of documents by interested parties: -

(a) A fee calculated at the rate of two shillings for every half-hour or fraction thereof occupied by such inspection.

(b) A fee calculated at the rate of 50 cents per folio of 72 words for every copy or extract granted and if any such copy or extract is required to be certified by the Administrator General as a true copy an additional fee of two shillings.

If, in any case, it appears to the Administrator General that the circumstances of an estate being administered by him are such as to render his duties in relation thereto exceptionally simple or otherwise of an exceptional character justifying this course, he may remit any part. not exceeding one half of the prescribed fees.

(See also under Court Fees).

Provided that any person paying royalty on cedar wood after the 31st July, 1924, shall be entitled until further notice to a refund calculated in the manner set out below, on satisfying the Conservator of Forests that such cedar wood has been exported in the form of pencil slats and billets, and sold to or for the account of pencil manufacturers.

The amount of the refund shall be calculated from the actual cubic contents of the slats or billets, exported. For this purpose a case containing 4,800 six-ply slats or a proportionate number of billets will be considered to measure twelve and one-half cubic feet.

The above rates shall be subject to a general reduction of 1 per cent. per mile outside a radius of 10 miles of any point on the Tanganyika Railways and their branches or of any recognised port on the coast or on the lakes Victoria Nyanza, Tanganyika and Nyasa and such reduction shall extend to a maximum of 30 per cent. after which no further reduction shall be made.

The measurement will be by cubic foot of sound bole calculated in the case of standing trees from the 1 girth at breast height (4ft. 7ins.) and the timber height from the ground with employment of suitable form factors.

The contents of fallen trees will be calculated from the mean 1 girths and lengths of the merchantable logs they contain.

Timber too unsound to measure in the bole will be split and sold by stacked measurement and Royalty payable in respect of such timber will be subject to a reduction of 25 per cent. of the Royalty prescribed for the species.

Unless otherwise stated all crown and branch wood is the property of the purchaser of the bole. At the discretion of a Forest Officer dead and refuse timber will be sold at half the above rates.

### 2. POSTS.

  - E. For determination of True Meridian, Shs. 30/-.
- F. Where no rates are specified a charge not exceeding Shs. 130/- per day will be made for special work. The amount of the charge will be determined by the Director of Surveys.
- G. A charge not exceeding Shs. 90/- per day will be made for time occupied in computations and office work necessary for the completion and ploting of a survey. The amount of the charge will be determined by the Director of Surveys.
- H. If the land to be surveyed is more than 5 miles from the Headquarters of the District Surveyor a charge at the rate of Shs. 90/- per day, or part thereof, may be made for time necessarily spent in getting to the land. For the purpose of this rule a day shall mean an average distance of not less than 15 miles along the route ordinarily taken by travellers.
- I. No charge for distance shall be made unless the Surveyor has to travel not less than 5 miles. Provided that in the case of estates which are more than 5 miles from the District Headquarters, but less than 5 miles from each other, the charge for distance from Headquarters may be divided amongst a group of adjacent estates at the discretion of the Director of Surveys.
  - J. For principal boundary mark or cairn, including mark stone, Shs. 6/-:
  - K. For other boundary marks or direction cairns, Shs. 4/-.
- L. Instead of the fees specified in A and B the following fees may be charged at the discretion of the Director of Surveys:—

		Open grass country.	gras	phant s and or open est.	Thick fores Mak swar	t or indu

For every additional acre above 1,000	 	0 20	0	40	0	60

These fees include all natural features (other than heights and contours), important roads, streams, and forest land within the boundary lines.

- M. For all rectilineal figures having more than six sides an additional charge of 1/20th of the fee specified in L may be made for any additional necessary side.
  - N. (a) The fee for the survey of a Township plot will be Shs. 60/- if such plot is surveyed prior to the erection thereon of any building.

- (b) The fee for the survey of a Township plot on which buildings have been erected will be in accordance with the work involved, but not less than Shs. 60/-.
- O. Generally the boundaries of estates, any road or tracks of importance, rivers, and streams running through such estates will be surveyed, but a more detailed survey will be made should the applicant so desire and intimate his wish in writing before the Surveyor commences the survey. The scale for survey of estates will generally be 1/10,000. If, however, the Director of Surveys considers it desirable to do so the scale may be increased or reduced.
  - P. The following rates will be charged for plans:-

For estates of less than 100 acres,

Drawing paper, Shs. 15/-. Tracing cloth, Shs. 10/-.

For estates of 100 to 1,000 acres, Drawing paper, Shs. 30/-. Tracing cloth, Shs. 15/-.

For estates of 1,000 to 20,000 acres,

Drawing paper, Shs. 90/-. Tracing cloth, Shs. 60/-.

For estates of above 20,000 acres in addition to the above,

Drawing paper, Shs. 30/- per 1,000 acres or less. Tracing cloth, Shs. 20/- per 1,000 acres or less.

#### (3) WEIGHTS AND MEASURES.

Weights and Measures in common use and their equivalents in Imperial Weights and Measures

#### WEIGHTS AND MEASURES.

Before the introduction of the decimal system of weights and measures by the late German Government the following standard weights and measures were in use among the natives:-

WEIGHT CAPACITY. 1 Ratili equal to about 1 lb. 1 Kibaba equal to about 1 pint or 13 lbs. ... 4 Kibaba ... 6 Pishi ... 10 Frasila 1 Wakia ... ... 1 ox. 1 Pishi ... 1 Frasila ... 1 Jizla

LINEAR. 1 Shibiri equal to about 9 inches: roughly based on the span with the thumb and little finger extended. ... 18 inches : ... 1 yard : calculated on the length from the finger tips to the elbow. 1 Wari

The late German Government, about 1910-11. introdeed the litre and metre as a standard measure.

The natives, however, continued to use the terms "pishi" and "kibaba" to denote the new measures of 4 litres and 1 litre capacity, although the metric measures were of greater capacity than the actual native measures.

There exists also an unofficial but universally recognised unit of measure known as the "debe." This term is applied to the European kerosene tin which, in consequence of its suitability for head porterage, has been adopted by the native as a convenient receptical for the conveyance of grain to market.

On the introduction of the metric system by the late German Government the official unit of weight became the kilo and both the native measure "ratili" (pound) and the kilo are now in common use in the native market.

The unit of linear measure became the metre and this measure with its sub-division, the ½ and ¼ metre, is still employed.

As from the 15th July, 1931, the Weights and Measures Ordinance came into force under which the following official weights and measures for the Territory were laid down:—

(a) Primary measure of weight (b) ,, ,, capacit The pound avoirdupois. ,, capacity The gallon. ,, ... ... ... (c) (d) The yard. ,, ,, The square yard. ,, surface ... ... ...

After the commencement of the Ordinance and unless otherwise permitted all transactions in the Territory involving weights or measures are required to be made in accordance with the official weights and measures of the Territory or in accordance with the weights and measures of the metric system

Subject to regulations prohibiting the same, however, the local or customary measures used by natives may be used as heretofore.

## (d)—General information regarding the industry and possibilities of development.

As a result of the continued and increased trade depression the local timber industry has virtually ceased to be. There has been this year only a fraction of the former normal demand and very low prices have ruled.

With improved general trade conditions the timber trade must also revive as timber and wood fuel are commodities without which the Territory cannot progress. There have been signs this year of a probable revival of interest in East African Cedar for pencil manufacturing. The Territory's forests remain as an increasing asset to be realised in more prosperous times.

Béche-de-mer caught at Tanga, Kilwa and Mikindani, is exported to Hong-Kong.

Seven parties performed field work during the year, three of which devoted themselves principally to geological mapping in the following areas: (a) Uluguru Mountains (for mica), (b) Kidodi region (for coal), (c) Kigoma Province (exploratory), (d) Iramba Plateau (for diamonds) and (e) Oldoway (archæological). Short reconnaissances were also made to investigate discoveries of nickel and corundum in the Central Province.

On the Iramba Plateau 12 new Kimberlite occurrences have been proved at intervals over a distance of about 70 miles from north to south, bringing the known records up to 33, nearly all of which have been examined by the Survey. In the Iramba area so far only two diamonds are reported. Three other parties were concerned with water supply work, two of which were operating drilling machinery, mostly in areas adjacent to the Central Railway and the third party was engaged in investigations concerned with the selection of boreholes, and in the supervision of the drilling plants. The seventh spent a short period in the field on return from leave on purely topographical mapping in the vicinity of Dodoma.

The area geologically surveyed amounted to some 533 square miles, and about 470 square miles were mapped by plane table.

The total mileage performed on foot by all parties amounted to 3,170 miles; 10,757 miles were covered by train, 225 miles by steamer, and 4,798 miles by motor car or lorry. One departmental motor lorry, and sometimes two, ran during the year, and much of the above mileage was performed in them. The two boring plants were transported 1,070 miles by rail and travelled under their own power 90 miles.

The first meeting of the Sub-Commission of African Geological Surveys was held in Kigoma under the. chairmanship of the Director. It was attended by representatives of the geological surveys of adjoining countries, both British and foreign, by representatives of the mining interests in the "copper belt", and by private geologists. Much useful discussion arose and the present knowledge of the geology of tropical Africa was crystallised in the form of a geological map now being compiled. This Department was represented at the first meeting of the Soil Erosion Committee at Dar es Salaam which was followed by a meeting of a Sub-Committee at Shinyanga of which the Director was convenor, to discuss soil erosion questions in that region. A comprehensive report dealing with combative measures resulted and this was submitted to the main Soil Erosion Committee for Government's attention

No well-construction work was performed this year by the survey as the vacant position of well foreman was not filled. The provision of water in waterless areas was undertaken by mechanical drilling instead. 2,803 feet of borehole were drilled by the new percussion plants provided out of Colonial Development Funds. Of this total footage 48 per cent. was in hard rock; the deepest borehole was 444 feet, and the shallowest was 128 feet. A total of 108,400 gallons per twenty-four hours were thus made available during the year at ten different sites.

The reservoir at Dodoma was brought into use at the beginning of the year. Although it was not filled by the season's rainfall, there remained at the end of the dry season (4th December) six million gallons. As a measure of safety it was considered desirable to augment the catchment area by constructing furrows along suitable slopes, and 9,500 feet of furrow, six feet by two feet average dimensions, were constructed under the supervision of members of the Survey. The catchment area has been increased from 350 acres to 540 acres by these furrows. The reservoir itself has also been increased and is now capable of containing forty million gallons.

The staff of the Survey has been reduced by three during the year. The post of well foreman was not filled at the beginning of the year. The appointment of translator of German scientific records was terminated at the end of March, and the retrenchment due to financial stringency claimed a boring foreman. In the laboratory over 600 examinations were made, of which 110 were for departmental purposes. This work comprised 155 fire assays for precious metals; wet assays for tin, chromium, zinc copper, nickel and other base metals; calorific determinations of coal samples; water analyses; mineral and petrographical determinations, etc. Revenue derived from laboratory fees showed an increase corresponding to nearly 100 per cent. over that of 1930.

Of special interest were the nickel discoveries, which resulted from the laboratory work of the survey. Magnetite containing up to 8 per cent. nickel was revealed by prospecting, and nickeliferous pyrrhotite, rarely exceeding 0.5 per cent. nickel, occurs in large veins. Unfortunately the whole occurrence proved to be uneconomic as a base metal proposition.

Equally interesting was the discovery in the laboratory of the fact that certain volcanic dust mixed with slaked lime and matured under certain conditions made an excellent cement for building purposes. In view of its importance to the development of areas remote from the coast where Portland cement is exceedingly costly, samples have been sent to the Imperial Institute for closer investigation. Analyses of soils collected by this and the Agricultural departments and carried out by the Imperial Institute show a marked deficiency of available phosphates. With this in mind, phosphate minerals have not been neglected by the survey, and one promising sample contains about 17 per cent. of tricalcium phosphate.

675 copies of publications, 380 copies of pamphlets produced by "Roneo" and 680 sunprints were distributed or produced by the secretarial and drawing office staffs.

#### 7. SUMMARY OF INDUSTRIAL DEVELOPMENT.

#### Agriculture.

In 1931 the effects of the slump in prices were accentuated and partly on account of the low prices paid in 1930 for their produce native cultivators gave less attention to cash crops and more to food crops. Thus the production of cotton and groundnuts shows a heavy decrease.

2. In addition to the above factors, there was a locust invasion in the Mwanza-Tabora Provinces which coincided with a late and brief rainy season. Elsewhere good rains fell. The production of sisal, despite the closing down of some areas showed an increase, due to pressure being put on the producers to reduce

advances, and by means of a greater output to reduce the incidence of overhead charges per ton of fibre produced.

- 3. The very great shortage of cash in the hands of traders resulted in a reversion to barter as a means of trading. The effect of this, plus the effect of low prices would normally be reflected by still lower production in 1932, but it is hoped that cultivators will be induced to realize that restriction of production in a Territory such as this is no way to overcome poverty.
- 4. The following export figures of the principal agricultural products of the Territory enable production in recent years to be compared with the pre-war year of 1913:—

		1913		19	929	19	930	1931	
		Quantity Cwts.	Value £	Quantity Cwts.	Value £	Quantity Cwts.	Value £	Quantity Cwts.	Value £
Sisal fibre	 	416,680	535,580	914,560	1,485,593	999,240	1,172,315	1,118,780	707,177
Cotton	 	43,840	120,753	98,948	487,863	73,414	247,413	48,526	119,752
Groundnuts	 	179,220	95,932	155,100	120,448	346,660	186,567	61,400	28,706
Coffee	 	21,180	46,563	177,140	588,871	230,940	397,040	185,020	$247\ 037$
Copra	 	109,540	117,401	158,400	145,015	147,900	109,733	144,680	62,209

Of these products groundnuts are grown entirely by the native, sisal fibre solely on the estates of the non-native and the remainder by both natives and non-natives.

#### Veterinary Science and Animal Husbandry.

Locusts depleted grazing very severely in the northwestern portion of the Territory, and there was unusual shortage of water about October; consequently stock mortality from drought was heavy.

- 2. Disease conditions were affected by these shortages in that congestion of cattle around permanent water-holes was associated with severe mortality from east coast fever; the only alternative, taken by some, being to seek grazing and water in tsetse fly areas with subsequent loss of many animals from trypanosomiasis.
- 3. Nevertheless, the general position with regard to diseases remained unchanged except in the case of rinderpest. This broke back badly and was checked with difficulty. By December, however, only the two districts of Musoma and Shinyanga were scheduled as wholly infected; outside of these, the district outbreaks were three in Arusha, five in Mwanza, two in Nzega, three in Tabora, one in Singida and four in Bukoba, all of which appeared to be well in hand.
- 4. Research work on rinderpest, trypanosomiasis and tick-borne diseases continued to go forward steadily, and there was a marked impetus to research on pasture management and animal nutrition.
- 5. Definite improvement in the marketing of hides could be noted. Prices of these and skins remained low, with an upward tendency at the end of the year.

#### Land.

The Land Ordinance (Cap. 68 of the Laws) provides for the grant of rights of occupancy for any definite period up to 99 years. The rent to be charged in the first instance for a right of occupancy granted to a non-native is determined by the offer of the highest bidder at public auction, subject to a reserve or upset rental, which is decided by the Governor. The upset rent varies in different localities, the minimum being fifty cents of a shilling per acre.

During 1931, 24,470 acres of agricultural and pastoral land were alienated, the largest alienations occurring in the Northern and Mwanza Provinces, the areas being 9,500 and 5,000 acres respectively.

The number of rights of occupancy granted in respect of trading plots, etc., during 1931 shows a decrease compared with the figures for the previous year.

During the year, 37 rights of occupancy were granted to missions, mainly in respect of school and church sites.

#### Mining.

Diamonds.—The total output of diamonds amounted to 7,790½ metric carats valued at £9,698. Of these 7,133·8 carats valued at £6,860 were won from the gravel deposit at Mabuki, Mwanza Province, and 656·7 carats valued at £2,838 from the claims at Kizumbi.

The number of stones weighing ten carats or over was 18, the largest stones being 17.25 carats from Mabuki and 29.25 carats from Shinyanga. From the

latter area diamonds valued up to £22 per carat were recovered.

The average value of the Mabuki stones dropped to 19s. 3d. per carat, as compared with £1 12s. 3d. per carat for the stones won in the previous year. This low value is explained, to some extent, by a further break in the diamond market during 1931; but was also largely due to the fact that the greater part of the output was won by re-treating the tailings dumps.

The Shinyanga stones were valued at the comparatively high average price of £4 2s. 3d. per carat.

During the year a number of kimberlite pipes, one of which is of considerable size, were discovered in two new localities; at Kiomboi near Mkalama, and Songele, near Ussure; both places being in the Central Province. The limited amount of prospecting so far carried out has not proved the occurrences to be diamondiferous.

Salt.—The total salt produced and sold by nonnatives amounted to 6,616 long tons, of which 2,157 tons were produced by the coastal salt works. The Nyanza Salt Works exported 2,441 tons to the Belgian Congo and Mr. Sargant 9 tons to Northern Rhodesia.

Mica.—The output of this mineral amounted to 8½ long tons, valued at £2,600. At the beginning of the year the price had fallen to a figure at which it was not possible for the older mines to produce mica at a profit, with the result that operations were very greatly curtailed. There was some evidence of a recovery in prices at the end of the year, and this should lead to the further exploitation of the extensive and high quality deposits of the Territory.

Tin.—The Central African Exploration Company continued vigorously to carry on the investigation of the stanniferous areas in Bukoba Province. Indications of considerable promise were discovered during the year. The discovery by an individual of detrital deposits, rich in cassiterite, but limited in extent, enabled him to win and export the ore at a substantial profit, in spite of the low price of the metal.

Gold.—The output of bullion amounted to 15,200 ounces an increase on that of the previous year. Of this amount approximately 8,000 ounces were recovered from the alluvial deposits of the Lupa, Sira and other streams in Mbeya District. There was a considerable influx of individuals into the District towards the end of the year. Financial arrangements were made for the exploitation of a number of promising reef occurrences, work on which has proved the existence of a considerable tonnage of payable ore.

Considerable activity was shown by individual prospectors in prospecting and mining the reef occurrences of Musoma District, and a number of small stamp-batteries were installed.

A fire in the main haulage shaft of Sekenke Mine seriously hindered development. By the end of the year a new main shaft had been sunk to a point below the lowest levels of the mine. The production of bullion amounted to 5,472 ounces.

Coal.—But little was done in 1931 further to investigate the extensive coal measures east and north of Lake Nyasa, and east of Lake Tanganyika. Financial conditions in Europe precluded certain important interests from taking, at present, an active part in developing the deposits.

Other Minerals.—A discovery of nickel-ore was made by a prospector early in the year. The occurrence was examined by a representative of the Falconbridge Nickel Mines Limited. Although confirming the presence of ores carrying a high percentage of nickel the company decided that the occurrence was not of sufficient promise to justify expenditure on a further investigation under existing financial circumstances.

General.—The continued world-wide depression in industry has discouraged expenditure on prospecting, in particular as regards the base metals, all of which have stood at abnormal low prices throughout the year. The increase in the price of gold, following on the suspension of the gold standard, caused considerably increased activity in the search for the precious metal.

NOTES:—Unskilled labourers are in almost every case given food and quarters in addition to wages; i.e. they are provided with practically every necessity in addition to their wages. Average number of hours worked—The figures are nominal; in practice the hours actually worked are almost always far shorter.

\*By "Penal Imprisonment" is meant imprisonment inflicted as a substantive punishment in pursuance of a sentence of a Court of Justice, as distinguished from imprisonment for safe custody, etc.

†Includes 85 male adults and 129 juveniles who were sentenced to eaning only.

#### Questions.

- I. If the prison is on a separate system, is the separation complete? And, if not what is the separation enforced by day and night respectively?
- II. If not on the separate system, what provision is there for the supervision of the prisoners while in association?
- III. How many cells are there; and how many associated wards?
- IV. Taking the average number of prisoners in gaol, how many cubic feet of space are there for each prisoner during the hours of sleep?

And what superficial area?

# No.

- (b) By day in gangs; 1 Warder to 5 Convicts.
- (c) By night in associated Wards and Cells, lighted from outside with secured doors and a sentry on guard.

Answers.

A sentry patrols regularly; all female prisoners are segregated from males.

(See list attached).

323 cubic feet.

35 square feet per man.

#### Questions.

#### V. How are the prisoners classified?

VI. Is penal labour—that is, labour by treadmill, crank or shot drill—in force?

VII. If so, during what periods of imprisonments, in respect of what classes of prisoners, and during how many hours, is such penal labour enforced? In stating hours of treadwheel labour, give first, the total time on and off at the wheel, etc.; secondly the length of spells and intervals of rest.

VIII. What kind of labour, other than penal labour, is in use?

IX. If the prisoners are employed beyond the walls of the gaol, state—

- 1. On what kind of work they are so employed.
- 2. How are they supervised?
- 3 How many escapes of prisoners, while being employed beyond the gaol, have taken place during each of the last three years?
  - 4. How the profits of their labour are accounted for.

X. What was the total annual cost of the prison during the year 1931?

XI. What was the annual amount of the prisoners' earnings during 1931?

XII. What is the number of the hours allotted for sleep? And, if sleep is in association, are the dormitories lighted? And how often are they patrolled during the night?

XIII. What were the number and nature of the punishments inflicted for offences committed by prisoners undergoing imprisonment?

Answers.
